marco vedana - photographer

In the last years of working as a freelance photographer I've been specializing in representing and documenting spaces, architecture and artworks (art as well as design objects).

A main issue in my work, is the representation through spherical panoramas (360°x180°) and finding new ways for art galleries and museums to benefit from this technique. For artists I take pictures of their artworks e.g. for printing matters. When I shoot portraits I always embed the subject in a greater spatial context.

In this commercial portfolio I'd like to give an overview of the fields I have been working for. I'm also a Google trusted and certified photographer.
